

Hello

I'm a beginner with Smath.

Very powerful tool – thanks to the inventor.

I have problem with the units.

Very simple example

$$E_{cm} := 30000$$

$$E_{c0m} := 22500$$

$$E_{cm} + E_{c0m} = 0,0525 \frac{\text{m s}^2}{\text{kg}} \frac{\text{MN}}{\text{m}^2}$$

What to do that the result is 52500 MN/m²

Any help is appreciated.

Bernd
